

The Environment

Climate Zones

- Wet Tropical
- Dry Tropical
- Temperate

- ↓ Cool Nights
- ↑ Warm Nights

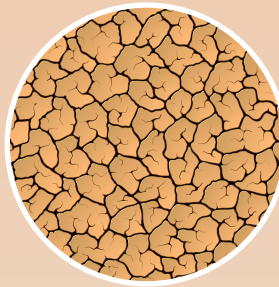

THREATS TO LIVELIHOODS

Major **food insecurity** hotspot

High levels of **undernourishment**

Areas of high **water stress** and physical water scarcity

Access to modern sources of **energy** is limited in isolated regions

WHAT WE CAN DO

Environmental **governance** needs to be more effective

The challenge of geographical **isolation** requires focus on remote areas for promoting sustainable development

Climate change adaptation needs a bottom-up approach

Nexus thinking can support effective management of water, energy and food systems
